Volume 1 | No. 2 | December 2025

ISSN: 3110-8652

Smart Technology and Engineering is a peer-reviewed academic journal dedicated to the dissemination of innovative research and developments in the fields of smart technologies, intelligent systems, and modern engineering solutions. The journal serves as a platform for academics, researchers, engineers, and industry professionals to share their insights and advancements that shape the future of engineering in a digital and sustainable world. As the global focus shifts toward environmentally responsible and efficient technologies, the journal actively promotes research that integrates intelligence with sustainability principles—supporting innovations that are not only technologically advanced but also eco-friendly and socially impactful. By encouraging interdisciplinary collaboration and the integration of cutting-edge technologies, Smart Technology and Engineering aims to bridge the gap between theoretical research and real-world applications. The journal publishes four issues every year, ensuring a consistent and timely dissemination of the latest research and developments in the field. Through original research articles, technical reports, and review papers, Smart Technology and Engineering aims to be at the forefront of the transition toward smarter, and more adaptive engineering solutions for the modern world.
